GPS NAVIGATION SYSTEM FOR LAPTOP AND TABLET PC WITH VOCAL AND VISUAL GUIDANCE

NaviPC is the first mobile system with the same map database and functionalities of the fixed navigation systems.

NaviPC is a kit that turns your laptop or tablet PC into a GPS navigation system with vocal and visual guidance in real time: with automatic recalculation of the route and many other functionalities it will drive you to the destination without stress and wasted time.

Activation of NaviPC is extremely simple: connect the receiver to the laptop's USB or serial port and enter the selected destination.

NaviPC functionalities:

- Immediate functioning in any vehicle without installation
- Setting destination with rapid research system for town, road, number or Point of Interest
- Calculation of the route with speed/distance, motorway and vehicle options
- Navigation with GPS system (Global Positioning System)
- Visualisation of the vehicle direction in front or to north
- Vocal and visual guidance before every crossroad or manoeuvre

Automatic zoom according to speed
