- **Bluetooth !**
- **Iphone / Android App !**
- **High accuracy !**
- **Very easy to use !**

All parents know the problem: My child has a fever and it has to be constantly measured so that it does not overheat. Especially at night this is a big problem. This cordless Bluetooth clinical fever thermometer is the perfect solution. You stick the thermometer with the enclosed silicone adhesive surfaces or with tape under the arm of your child and turn on the Thermosafer app on your Iphone or Android smartphone and you can see the current temperature. You can also set an alarm (eg. 40°C) so that you receive an alarm immediately upon reaching it (perfect for long strenuous fever nights).

The thermometer is battery powered (CR2032). In continuous operation, it lasts about 14 days. The accuracy of the thermometer is +/- 0.1°C. In addition to the alarm function, the app also has an automatic recording so that you can also see the body temperature in the course (perfect for example, to show a doctor). The app can also manage several people if you have several children.

Specifications:

- Protocol: Bluetooth 4.0 BLE
- Maximum range: 15 meters
- Temperature range: 25°-65°C (accuracy +/- 0.1°C)
- Battery: CR2032 (DC 3V)
- Size: 57x29x6mm
- App Compatibility: IOS / Android (downloadable for free in the App Stores)

Scope of delivery:

- Bluetooth clinical thermometer
- Practical case
- 4x silicone adhesive strips
- CR2032 battery
- Manual
