

Downloading QCSerial2kSierra.c, QCUSBNetSierra.c and Makefiles

The QCSerial2kSierra.c, QCUSBNetSierra.c and their associated Makefiles go out as open-source software from CAF. To access the software code files, customers should navigate to the link <https://www.codeaurora.org/> and select the Gobi project. One can go directly to the releases through https://www.codeaurora.org/wiki/GOBI_Releases.

The open-source package is named as follows: **VT773.Gobi2000Drivers_mmddyyyy.tar.gz**. Please ensure that you download the VT773 package as this is the only one that will work with the Sierra Gobi module.
